

PandaCare Reporting Platform – Build Receipt / Requirements

Project Objective

Build a live KPI reporting platform for PandaCare that gives management a clear, instant view of:

1. Lead volume
2. Lead source performance
3. Marketing spend efficiency
4. Pipeline conversion
5. Employee performance
6. Campaign performance
7. Customer acquisition cost
8. Client lifecycle and retention
9. Data quality issues

The dashboard should operate like a management command center. A user should understand what is working, what is broken, and who is responsible within 10 seconds of opening the dashboard.

Core Reporting Rule

PandaCare uses a multi-stage pipeline in GoHighLevel (Michigan – Lead to Customer Pipeline) before a lead becomes a client. The reporting platform must be designed around this exact pipeline structure:

Pipeline Position	Stage Name
----------------------	------------

Stage 1	Unassigned Lead
---------	-----------------

Stage 2	Vetting Lead
Stage 3	MCD Applicant
Stage 4	Pending HH App. Forms
Stage 5	Dr. Appt. Scheduled
Stage 6	Referred to the County
Stage 7	ASW Assigned, Pending CA
Stage 8	CA Scheduled
Stage 9	CA Completed, Pending Auth
Stage 10	Auth Received, Pending PA
Stage 11	Provided Clock-in Information
Final Outcome	Client / Closed
Disqualified	Non-Qualified Lead

Disqualified

Failed CA

The dashboard should not create separate pipeline logic for different tabs. Every part of the platform must use this same pipeline structure.

If PandaCare adds, renames, or removes a GHL stage in the future, the backend mapping must be updated accordingly. No pipeline logic should be hardcoded outside of this mapping.

Non-Negotiable Dashboard Rules

The dashboard must follow these rules:

- No dropdowns
- No filters
- No date pickers
- No required clicking
- No hidden analysis
- All major KPIs visible immediately
- All data is displayed month-over-month automatically
- Current month and prior months are visible on load
- Dashboard must be simple, clean, visual, and management-friendly
- KPI logic must match the internal PandaCare KPI sheet
(Basically, we are already working on that sheet, and based on its metrics, we are trying to display the data in widget format.)
- Data should refresh automatically or on a fixed schedule
- Every KPI must have a clear source and formula

Required Data Sources

Core Data Model

The reporting platform should have clean backend tables. Do not build everything directly from messy source exports.

Table 1: Leads Table

One row per unique lead.

Required fields:

Field	Description
Lead ID	Unique lead/contact identifier
Created Date	Date lead entered CRM
Cohort Month	The month lead was created
Source	Standardized lead source (Can you please confirm which lead source you are referring to?) All sources, such as Indeed, Meta Google, organic, etc
Raw Source	Original source from CRM
UTM Source	Captured UTM source
UTM Medium	Captured UTM medium
UTM Campaign	Captured UTM campaign
UTM Content	Captured UTM content/ad
Campaign Name	Normalized campaign name

Assigned Rep	Employee responsible
Current Stage	Current GHL pipeline stage
First Contact Date	First meaningful contact (What exactly do you mean by a “meaningful contact”? Are you referring to any specific tagging, stage movement, or something else? Could you please explain? At the moment, the first outbound message—whether SMS, email, or call—is considered the first contact date.
Unassigned Lead Date	Timestamp lead entered Unassigned Lead
Vetting Lead Date	Timestamp lead entered Vetting Lead
MCD Applicant Date	Timestamp lead entered MCD Applicant
Pending HH App. Forms Date	Timestamp lead entered Pending HH App. Forms
Dr. Appt. Scheduled Date	Timestamp lead entered Dr. Appt. Scheduled
Referred to County Date	Timestamp lead entered. Referred to the County
ASW Assigned Pending CA Date	Timestamp lead entered ASW Assigned, Pending CA

CA Scheduled Date	Timestamp lead entered CA Scheduled
CA Completed Pending Auth Date	Timestamp lead entered CA Completed, Pending Auth
Auth Received Pending PA Date	Timestamp lead entered Auth Received, Pending PA
Provided Clock-in Information Date	Timestamp lead entered. Provided Clock-in Information
Closed Date	Date became a client (We will consider the closed date as the date when the lead reaches the “Provide Clock-in Information” stage.)
Client Status	Client / not client (We will track leads in this way: any lead that is not in the “Provide Clock-in Information” stage will be considered a non-client. If a lead reaches the “Provide Clock-in Information” stage, it will be considered a client.)
Client Start Date	Date client became active (first clock-in / activation) (Date on which client entered in the Provided Clock In Information Date)
Client End Date	Date client churned/stopped service (Could you explain where and how this date is stored in the CRM?)
Churn Reason	Reason the client ended service, if applicable (How or where you save this Date in CRM)

Disqualified Date	Date disqualified, if applicable (We will treat the date when a lead enters the “Disqualified” stage as the disqualification date. Please confirm the exact stage name to be used for this status.)
Disqualified Reason	Reason lead did not convert (Non-Qualified Lead, Failed CA, or other) (How do we capture the reason? Is it stored in a custom field or based on the stage name?)
Location	City, county, state, zip if available
Duplicate Flag	Yes/no (Means Dupliacated Opprtunities in the Same Pipeline having same email or phone)
Test Lead Flag	Yes/no (What exactly mean can you please explain)

Table 2: Ad Spend Table

One row per month, source, and campaign.

Field	Description
Month	Reporting month
Source	Google, Meta, Indeed, etc. (We will do only META because the only source access we have)

Campaign Name	Campaign
Spend	Total spend
Impressions	Ad impressions
Clicks	Ad clicks
CTR	Click-through rate
CPC	Cost per click
Platform Leads	Leads reported by the ad platform
CRM Leads	Leads found in CRM
Notes	Manual notes/adjustments

Table 3: Activity Table

One row per completed rep activity.

Field	Description
Activity ID	Unique activity ID

Lead ID	Related lead
Rep	Employee
Activity Type	Call, SMS, email, task, note
Activity Date/Time	Timestamp
Direction	Inbound or outbound
Outcome	Connected, no answer, replied, etc. We are receiving inbound message webhooks, but since there is no threading connection between messages, we cannot determine the outcomes . Specifically for the call we can distinguish between the call connected and the Voice mail call that data will be provided by the Webhook
Meaningful Contact Flag	Yes/no (What is the identification of the meaningful Contact ?)

Table 4: Employee Table

One row per employee.

Field	Description
Employee Name	Rep name
Role	Intake, sales, manager, etc. (By default, CRM has 4 Roles Account Admin, AccountUser, AgencyUser, and AgencyAdmin). How can we identify from the CRM which one is intake, which one is Sale
Active Status	Active/inactive

Table 5: KPI Target Table Need Clarification

One row per KPI.

Field	Description
KPI Name	Metric
Target	Target value (What parameter is used for that target value? Is it the Opportunity Closing Ratio per month or something else?)

**Green
Threshold** **Strong
performance**

**Yellow
Threshold** **Watch zone**

Red Threshold **Problem zone**

Targets should be adjustable in the backend, not through dashboard filters.

Main Dashboard Tabs

I've reviewed your documents in detail, and overall everything is well explained and easy to understand. However, from a development perspective, there are still a few implementation details that are not completely clear.

The design ideas you've shared are helpful, but currently, they are only described in text. To move forward more effectively, it would be best to first convert these ideas into a proper Figma design (UI mockups).

This step is important, especially since the project has already faced some delays. Finalizing the design in Figma will help ensure that both design and development are aligned before we begin coding.

Creating a Figma design will help us:

- Clearly visualize how the dashboard will look
- Understand the user flow across different tabs and KPI sections
- Align structure and expectations between design and development
- Reduce confusion during implementation
- Avoid rework and further delays

Once the Figma design is finalized and approved, we will proceed with development based on that design to ensure accuracy and consistency with your requirements.

Tab 1: Executive Summary

Purpose: Give management a fast overview.

Top KPI cards:

KPI	Current Month	Prior Month	MoM Change
Total Leads			
New Clients			
Overall Conversion Rate			
Cost Per Lead			
Customer Acquisition Cost			
Avg Speed to Lead			

Contact Rate

Avg Client Lifespan (Days)

Active Client Count

Required visuals:

- Leads by source
- Pipeline snapshot (count of leads in each of the 11 pipeline stages)
- CAC by source
- Top 5 campaigns
- Worst 5 campaigns
- Employee leaderboard
- Client lifecycle summary (avg days active, churn rate, active clients)
- Data quality alert box

The executive page should answer:

- Are leads up or down?
- Are clients up or down?
- Is CAC improving or worsening?
- Which source is best?
- Which campaign is the worst?
- Which employee is performing best?
- Where is the pipeline breaking?
- How long are clients staying with us before they churn?

Tab 2: Lead Source Performance

Purpose: Show where leads come from and how each source performs.

Required sections:

Leads by Source

Monthly view of:

- Google

- Meta
- Indeed
- Organic
- Referral
- Website direct
- Call-in
- Other/unknown

Required chart:

- Stacked monthly bar chart
- Source mix table
- MoM change by source

Cost Per Lead

Formula: $CPL = \text{Spend} \div \text{Leads}$

Show:

- CPL by source
- CPL by month
- What does “Blended CPL” refer to—combined CPL across sources and months, or a different calculation?

Lead Quality by Source

Show each source through every pipeline stage.

Source	Leads	Unsigned Lead	Vetting Lead	MCD Applicant	Pending HH App. Forms	Dr. Appt. Schedule	Referred to the County	AS W Assigned Pending CA	CA Scheduled	CA Completed Pending Auth	Auth Received Pending PA	Provided Clock-in Information	Clients	Conversion Rate	CAC
--------	-------	---------------	--------------	---------------	-----------------------	--------------------	------------------------	--------------------------	--------------	---------------------------	--------------------------	-------------------------------	---------	-----------------	-----

Geographic Performance

Show by:

- State
- Country

- City
- Zip code, if available

Metrics:

- Leads
- Clients
- Conversion rate
- CAC
- Disqualification %

Tab 3: Conversion Performance

Purpose: Show how leads move through the PandaCare pipeline.

Full Pipeline Conversion

Core table:

Stage	Count	Stage-to-Stage Conversion	Total Lead Conversion	Drop-Off Count	Drop-Off %
Unassigned Lead		100%	100%		
Vetting Lead					
MCD Applicant					
Pending HH App. Forms					
Dr. Appt. Scheduled					

**Referred to the
County**

**ASW Assigned,
Pending CA**

CA Scheduled

**CA Completed,
Pending Auth**

**Auth Received,
Pending PA**

**Provided Clock-in
Information**

Client / Closed

Required visual:

- **Pipeline funnel chart (visualizing all 11 stages plus client outcome)**
- **Drop-off bar chart by stage**
- **Stage-to-stage conversion rate displayed for every transition**

Stage-to-Stage Transitions to Track

The dashboard must explicitly show conversion rates for every transition:

- **Unassigned Lead → Vetting Lead**
- **Vetting Lead → MCD Applicant**
- **MCD Applicant → Pending HH App. Forms**
- **Pending HH App. Forms → Dr. Appt. Scheduled**
- **Dr. Appt. Scheduled → Referred to County**

- Referred to County → ASW Assigned, Pending CA
- ASW Assigned, Pending CA → CA Scheduled
- CA Scheduled → CA Completed, Pending Auth
- CA Completed, Pending Auth → Auth Received, Pending PA
- Auth Received, Pending PA → Provided Clock-in Information
- Provided Clock-in Information → Client / Closed

Overall Conversion Rate

Formula: Overall Conversion Rate = Clients ÷ Total Leads

Show by:

- Month
- Source
- Campaign
- Employee
- Cohort

Time to Convert

Required metrics:

- Time from lead creation to first contact
- Time from lead creation to each pipeline stage
- Time from lead creation to client
- Average days to close
- Median days to close

Use the median wherever possible because old, untouched leads distort averages.

Disqualified / Lost Leads

Required categories:

- No response
- Non-Qualified Lead (GHL stage)
- Failed CA (GHL stage)
- Wrong location
- Duplicate
- Not interested
- Missing documents
- Eligibility issue
- Already has a provider
- Other

Show:

- Count
- % of total leads
- % of lost leads
- MoM change

Use a bar chart instead of a pie chart.

Tab 4: Cohort Performance (please provide clarification)

Purpose: Track leads based on the month they entered the CRM, not just the month they became clients.

This is critical because leads may convert later.

Example:

Cohort Month	Source	Leads	Vetting Lead	MCD Applicant	Pending HH App. Forms	Dr. Appt. Schedule	Referred to the County	ASW Assigned Pending CA	CAScheduled	CACompleted Pending Auth	Auth Received Pending PA	Provided Clock-in Information	Clients	Conversion Rate	CAC
--------------	--------	-------	--------------	---------------	-----------------------	--------------------	------------------------	-------------------------	-------------	--------------------------	--------------------------	-------------------------------	---------	-----------------	-----

Required views:

- Cohort by month
- Cohort by source
- Cohort by campaign
- Cohort by employee
- Days-to-client by cohort

This shows true marketing ROI.

Tab 5: Employee Performance

Purpose: Evaluate rep performance fairly and clearly.

Rep Scorecard

Rep	Leads Assigned	Contact Rate	Avg Speed to Lead	Avg Follow-Ups	Clients	Conversion Rate
-----	----------------	--------------	-------------------	----------------	---------	-----------------

Rep Pipeline Performance

Show each rep's lead count at every pipeline stage, plus their biggest drop-off transition.

Rep	Leads	Venture Capital	MCD Applicant	Pending HH App. Forms	Dr. Appt. Scheduled	Referred to the County	ASW Assigned Pending CA	CA Scheduled	CA Completed Pending Auth	Auth Received Pending PA	Provided Clock-in Information	Clients	Biggest Drop-Off Stage
-----	-------	-----------------	---------------	-----------------------	---------------------	------------------------	-------------------------	--------------	---------------------------	--------------------------	-------------------------------	---------	------------------------

The "Biggest Drop-Off Stage" column should reference the specific GHL stage transition where the rep is losing the most leads (e.g., "Pending HH App. Forms → Dr. Appt. Scheduled").

Speed to Lead

Show:

- Average speed to lead
- Median speed to lead
- % contacted within 5 minutes
- % contacted within 1 hour
- % contacted the same day
- Leads never contacted

Follow-Up Discipline

Show:

- Calls per lead

- Texts per lead
- Emails per lead
- Total touches per lead
- Leads with no activity
- One-touch leads
- Tasks completed

Pipeline Management

Show stale leads by employee.

Suggested stale lead thresholds per stage:

GHL Stage	Stale After
Unassigned Lead	1 day
Vetting Lead	2 days
MCD Applicant	3 days
Pending HH App. Forms	5 days
Dr. Appt. Scheduled	5 days
Referred to the County	7 days
ASW Assigned, Pending CA	5 days
CA Scheduled	5 days

CA Completed, Pending Auth 7 days

Auth Received, Pending PA 7 days

Provided Clock-in Information 3 days

These thresholds should be editable in the backend KPI target sheet.

Tab 6: Campaign and Creative Performance

Purpose: Identify which ads and messages actually produce clients.

Required sections:

Campaign Summary

Campaign	Source	Spend	Leads	Clients	CPL	CAC	Conversion Rate
-----------------	---------------	--------------	--------------	----------------	------------	------------	------------------------

Top 5 Campaigns

Rank by:

- 1. CAC**
- 2. Conversion rate**
- 3. Lead volume**
- 4. Spend efficiency**

Worst 5 Campaigns

Flag campaigns with:

- High spend**
- High CPL**
- High CAC**

- Low conversion
- High disqualification rate
- No client conversion

Creative / Message Performance

Track performance by ad angle, such as:

- Get paid to care for your loved one
- Medicaid caregiver ad
- Competitor ad
- Family caregiver ad
- Location-specific ad
- Spanish-language ad
- Indeed job-style ad

Message Type	Leads	Clients	Conversion Rate	CPL	CAC
--------------	-------	---------	-----------------	-----	-----

What is the correct way to track which ad message generated each lead (e.g., caregiver, Spanish, or location-based ads)? Should we use UTM parameters, campaign naming, or a predefined mapping provided by your side?

Tab 7: Client Lifecycle & Retention

Purpose: Track how long clients stay with PandaCare after they convert, and how that varies by source, campaign, and rep. Acquisition is only half the picture — retention is the other half.

A client is considered "active" once they reach the Provided Clock-in Information stage and have a recorded first shift/activation. A client is considered "churned" when service ends, regardless of reason.

Core Lifecycle KPIs

KPI	Current Month	Prior Month	MoM Change	3-Month Trend
-----	---------------	-------------	------------	---------------

Avg Client Lifespan (days)

Median Client Lifespan (days)

Active Client Count

New Clients (this month)

Churned Clients (this month)

Monthly Churn Rate

**Avg Days to First Churn Risk
Signal**

Formulas

- **Avg Client Lifespan = Average of (Client End Date – Client Start Date) across all churned clients in the period**
- **Median Client Lifespan = Median of (Client End Date – Client Start Date) across all churned clients in the period**
- **Monthly Churn Rate = Clients churned in month ÷ Active clients at start of month**
- **Active Client Count = Clients with Client Start Date populated and no Client End Date**

For currently active clients (still with PandaCare), lifespan should be calculated as (Today – Client Start Date) and shown separately as "tenure" so it does not skew the churn lifespan calculation.

Lifespan by Source

Source	Total Clients	Avg Lifespan (days)	Median Lifespan (days)	Churn Rate	Still Active
--------	---------------	---------------------	------------------------	------------	--------------

Lifespan by Campaign

Campaign	Total Clients	Avg Lifespan (days)	Median Lifespan (days)	Churn Rate
----------	---------------	---------------------	------------------------	------------

Lifespan by Cohort Month

Cohort Month	Clients	Avg Lifespan (days)	% Still Active	% Churned
--------------	---------	---------------------	----------------	-----------

Churn Reason Breakdown

Churn Reason	Count	% of Churned Clients	MoM Change
--------------	-------	----------------------	------------

Use a bar chart, not a pie chart.

Why this tab matters

- A campaign that produces clients who churn in 30 days is a worse investment than one producing clients who stay 12 months, even if CAC looks identical.
- This tab should be cross-referenced with Tab 6 to identify which campaigns produce sticky clients vs. churners.
- LTV calculations in Phase 2 will depend on the lifespan data captured here.

It is possible because every KPI is derived from client start/end timestamps generated automatically from GHL stage movements.

Tab 8: Data Quality / Exceptions

Purpose: Make sure the dashboard is trusted.

The platform must automatically flag bad or incomplete data.

Required exception checks:

Issue	Count	Why It Matters
Leads missing source		Breaks attribution
Leads missing campaign		Breaks campaign reporting
Leads missing assigned rep		Breaks employee reporting
Leads are missing the created date		Breaks cohort tracking
Leads missing stage		Breaks pipeline reporting
Leads in stages are not recognized in the GHL pipeline		Breaks pipeline reporting
Closed leads are missing a close date		Breaks time-to-close
Active clients missing Client Start Date		Breaks lifecycle tracking
Churned clients missing Client End Date		Breaks lifespan calculation

Churned clients are missing the Churn Reason

Breaks churn analysis

Duplicate leads

Inflates the lead volume

Test leads not excluded

Pollutes reporting

Leads with no activity

Shows follow-up problem

Spend not matched to the source

Breaks CPL/CAC

Ad platform leads not found in CRM

Shows tracking issue

CRM leads with no UTM

Weakens attribution

This tab is not optional. A dashboard without data quality controls will eventually become unreliable.

Required KPI Formulas

KPI	Formula
Total Leads	Count of unique valid leads
Leads by Source	Leads grouped by standardized source

Cost Per Lead

Spend ÷ Leads

Clients

Count of leads that became clients

Conversion Rate

Clients ÷ Leads

CAC

Spend ÷ Clients

Contact Rate

Contacted leads ÷ total leads

Speed to Lead

First contact time – lead created time
(Contact Created Date = CRM entry
time
first outbound activity timestamp)

Stage Conversion Rate

Current stage count ÷ prior stage count

Total Pipeline Conversion

Stage count ÷ total leads

Drop-Off Count

Prior stage count – current stage count

Drop-Off %

Drop-off count ÷ prior stage count

Time to Close

Closed date – created date

Follow-Ups Per Lead

Completed activities ÷ leads assigned

Stale Leads	Leads with no activity or movement after the stage-specific threshold
Disqualification Rate	Disqualified leads ÷ total leads
Cohort Conversion	Clients from cohort ÷ leads in cohort
Blended CAC	Total spend ÷ total clients
Avg Client Lifespan	Average of (Client End Date – Client Start Date) for churned clients
Median Client Lifespan	Median of (Client End Date – Client Start Date) for churned clients
Monthly Churn Rate	Clients churned in the month ÷ Active clients at the start of the month
Active Client Count	Count of clients with Client Start Date populated and no Client End Date

Attribution Rules

The platform must standardize attribution.

Use this hierarchy:

1. UTM source / UTM campaign
2. Ad platform lead ID
3. GoHighLevel source field

4. Landing page or form source
5. Manual source field
6. Unknown

Normalize source names. Example:

Raw Source	Standard Source
google	Google
gads	Google
Google Ads	Google
facebook	Meta
fb	Meta
instagram	Meta
IG	Meta
indeed	Indeed
website	Organic
direct	Organic

referral Referral

Unknown sources should not be hidden. They should be shown as Unknown and flagged in the data quality tab.

Required Automated Alerts

The dashboard should include red/yellow/green status indicators.

Suggested rules:

Metric	Green	Yellow	Red
Speed to Lead	Under 5 min	5–60 min	Over 60 min
Contact Rate	85%+	70–85%	Under 70%
Overall Conversion	30%+	20–30%	Under 20%
CPL	Below target	Within 10% of the target	10%+ above target
CAC	Below target	Within 10% of the target	10%+ above target
Leads With No Activity	Under 5%	5–10%	10%+

Missing Source	Under 2%	2–5%	5%+
Missing Rep	Under 2%	2–5%	5%+
Avg Client Lifespan	Above target	Within 10% below target	10%+ below target
Monthly Churn Rate	Below target	Within 10% above target	10%+ above target

Targets should be editable in the backend KPI target sheet.

Month-over-Month Reporting Requirement

Every major KPI should show:

- Current month
- Prior month
- Month-over-month change
- Last 3-month trend
- Year-to-date total where useful

Example format:

KPI	Current Month	Prior Month	MoM Change	3-Month Trend
Leads	360	330	+9.1%	Up
Clients	110	100	+10.0%	Up

CAC	\$215	\$230	-6.5%	Improving
Conversion Rate	30.5%	30.3%	+20 bps	Stable
Avg Client Lifespan	287 days	275 days	+4.4%	Improving
Monthly Churn Rate	4.2%	4.8%	-60 bps	Improving
